Field Evaluation of Deep Neural Networks for Foliage Disease Detection

Maria Gomez, Liam Patel

Published: 2023, Phytopathology Informatics

ABSTRACT

Early detection of foliage blight in solanaceous crops is vital for agricultural yield.

METHODOLOGY

We trained MobileNetV3 and YOLOv5 on 12,000 leaf images.

LIMITATIONS

Evaluations were restricted to dry weather conditions; droplet specular reflections degrade accuracy.

FUTURE WORK

Multi-spectral cameras must be benchmarked under simulated rain conditions.
